

ACCU-TREK™**COMPUTER SYSTEM...**

FINALLY... An Electronic Torque Monitoring System that can be completely tong mounted and operated by the tong operator. Frank's New **Accu-Trek** Computer System has been designed for the customer who doesn't require all of the features of the more sophisticated Data Trek Computer System.

Frank's Accu-Trek Computer System

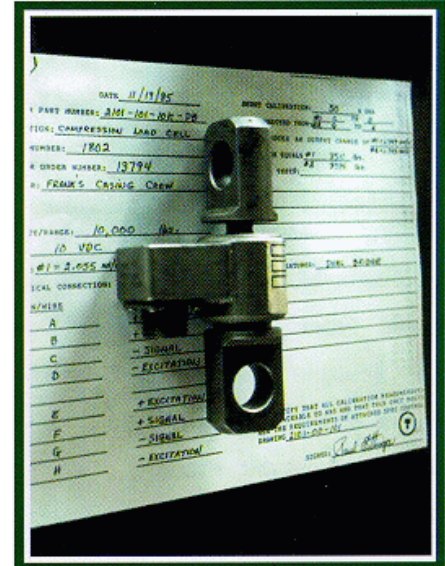

The **ACCU-TREK** computer system is a fully IBM compatible computer which monitor connection makeup, controls the amount of torque applied, and records the data for each connection.

As with Frank's other state-of-the-art connection monitoring technology, the **ACCU-TREK** system provides on site calibration verification and real-time data recall features. Unlike other tong mounted systems, the **ACCU-TREK** provides a graphical display of the makeup.

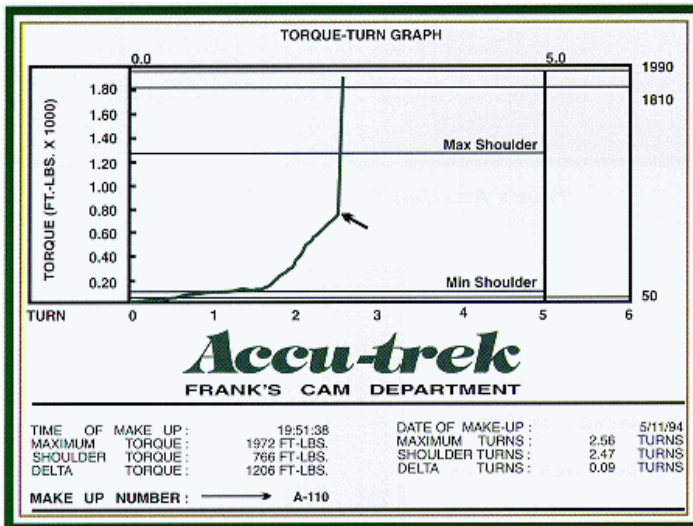

ACCU-TREK System Features...

Completely Tong Mounted
 Suitable for Class I, Div. II Hazardous Locations
 Custom Load Cells Traceable to NBS
 Instant Data Recall
 Turn Resolutions to 1000th of a Turn
 Graphic & Digital Display of each Make-Up
 Computer Controlled Dump Valve
 Calibration Verification Feature
 Auto Joint Increment and Reset
 Programmable Audio Horn
 Custom Menu Driven Software
 Fully IBM PC Compatible
 On-Site Printing Capabilities Available
 Comment Storage Feature for each Joint
 Records Date & Time of Make-up
 Data Analysis Feature provides Frequency Distribution
 Graphs for each Weight & Grade of Pipe

Custom Manufactured Load Cells

Accu-Trek Make-up Graph Printout

The **ACCU-TREK** can be configured with a variety of unique load cells to adapt to any type of manual or hydraulic tong. This flexibility enables the **ACCU-TREK** to be used for jobs requiring just a few hundred foot pounds of torque or jobs that require up to 200,000 foot pounds of torque.

The state-of-the-art data acquisition technology used for the **ACCU-TREK** system is the same proven method used for our Data Trek H.E. System.
