

FRANK'S COBRA™

CONTROL LINE MANIPULATING ARM

- Combines the benefits of the Rotating Control Line Sleeve Protector System with the Control Line Pusher Arm into one system
- Provides ultimate protection of control lines and umbilicals while working with most flush-mount spider systems
- Enhanced Interlock System prevents the slips from closing on the control lines
- The Cobra automatically deploys an auxiliary roller under the main roller head, positioning the control lines against the pipe to assist clamp installation
- Multiple control lines can be handled at a low entry angle under high tension
- Easy to rig up and down
- Controlled via remote control; dual latches enhances rig floor safety, preventing the boom from lowering on personnel
- Available custom configured rollers for project-specific applications
- Large throat roller sets available for passing umbilicals as large as 4 1/2"
