Frank's Handling Tools....

The Right Tool To Do The Job Right!

Frank's inventories an extensive line of casing and tubing handling tools. All tools are maintained by a Frank's trained maintenance staff to insure the safety and reliability of every tool.

In keeping with our commitment for safety and constant improvement of operations, Frank's has developed an added equipment option for more fail-safe operations. With Frank's "Fail Safe" System, the slips on one tool will not open unless the mating tool is securely latched around the pipe body. Settings the slips on the collar will not allow the other tool to be unlatched.
